

48 HOUR ONLINE CHALLENGE on CIRCULAR ECONOMY in DESIGN
May 16 – 17, 2020

According to the World Bank, the construction sector generates almost half of the world's waste. The growing world population and the massive global urbanization have made the building industry one of the biggest waste generators. In a world with unprecedented pressure on our planetary resources, this calls for immediate action.

ECOWEEK organizes its first online event! Students of Architecture, Design and Landscape Design, and young professionals in these fields, are invited to join us in an interactive 48-hour event! Experts in the field of Circular Economy will share their expertise and their work around the globe and will engage participants in a hands-on design challenge.

ECOWEEK events are an opportunity to meet professionals, and network with peers from around the world.

ECOWEEK will host leading professionals in the field of Sustainable Design, Design for Disassembly, Internet of Things and Material banks, aiming to optimize circular construction practices, environmentally friendly spaces, and materials, and reuse of resources in the construction chain.

Among them **Jan Jonjert** and **Lizanne Dirx** of **Superuse**, **The New Raw**, **MOR team of TUDelft**, **Dr. Konstantinos Giannakopoulos** from **Democritus Center for Scientific Research** and **Benjamin Gill** of **Bioregional**.

Do you want to be part of it? **It's free!** Join us now!
